

CANADIAN TRANSPLANT REGISTRY

Today, we are happy to announce release 5.0.7.1 of the Canadian Transplant Registry. This release focuses on preparations for the IPOS Heart Project, improved general functionality and enhancements, based on user feedback.

What's New in this Release

General updates

- In preparation for the IPOS Heart project, the Highly Sensitized field will be displayed for all patients with a Heart organ request and the Dashboard Patients section, specifically the Recipients – DWL section, now includes a new Quick Filter labelled HS Heart Eligible Patients (HS for High Status).

Updates to Deceased Donor records

- The Deceased Donor record has several field changes and additions:
 - o The Personal Tab now includes a new section near the bottom of the tab, **labelled Social Details**. This section includes one new drop-down field, labelled Country of Residence.
 - o The Assessment Tab now includes new sections and fields, including:
 - A new section labelled **Medications**. This section allows the user to enter details regarding medications given to the patient.
 - Some additions to the **Serology** section, which now includes two new available tests, Hepatitis C Nat and Hepatitis D Ab
 - Some additions to the **Med-Social History** section, which now includes a new option for Genetic Metabolic Disorder
 - Some additions to the **Tests & Diagnostics** section, which now includes a new subsection labelled Abdominal Profile. The Heart Profile subsection has been renamed to Cardiac Profile and new tests have been added. Finally, the Chemistry subsection has a new test.

Updates to Recipient list and records

- The DWL Recipient record has several field changes and additions:
 - o The Personal Tab now includes a new section near the bottom of the tab, labelled **Social Details**. This section includes 17 new fields to include patient social details. None of the fields are considered mandatory data.
 - o The Health Tab now includes several new sections, including:
 - A new section labelled **Medical History**. This section includes 18 new fields to include patient Medical History, primarily heart related.
 - A new section, labelled **Diagnosis – Infection**. This section allows the user to enter details regarding any infections and related treatments.
 - A new section, labelled **Diagnosis – Malignancy**. This section allows the user to enter details regarding malignancy pre-transplant.
 - A new section, labelled **Medications**. This section allows the user to enter details regarding medications given to the patient.
 - Some additions to the **Serology** section, which now includes two new available tests, Hepatitis C Nat and Hepatitis D Ab
 - o The Registration/Activation Organ Request tab now displays the **Eligibility** column in the Organ Requests section. Correspondingly, the HSH Eligibility will also be displayed in the Program Details section below the Organ Requests section, if the selected organ request is for a heart.

Updates to KPD Recipient list and records

- The KPD Recipient list has a new column, labelled Highly Sensitized. This column displays the values Yes or No.
- The KPD Recipient Record has several field changes and additions:
 - o The Personal Tab now includes a new section near the bottom of the tab, labelled **Social Details**. This section includes 17 new fields to include patient social details. None of the fields are considered mandatory data.
 - o The Health Tab now includes several new sections, including:
 - A new section labelled **Medical History**. This section includes 18 new fields to include patient Medical History, primarily heart related.
 - A new section, labelled **Diagnosis – Infection**. This section allows the user to enter details regarding any infections and related treatments.
 - A new section, labelled **Diagnosis – Malignancy**. This section allows the user to enter details regarding malignancy pre-transplant.
 - A new section, labelled **Medications**. This section allows the user to enter details regarding medications given to the patient.

- Some additions to the **Serology** section, which now includes two new available tests, Hepatitis C Nat and Hepatitis D Ab

Other updates

- This release of the CTR also includes fixes and enhancements to ensure proper functionality and to improve overall performance. If you have any questions regarding this release or would like to report an issue with the Canadian Transplant Registry, please do not hesitate to contact us.
